The **U** S **E** nvironmental **P**rotection **A**gency (EPA) has announced that it will be reviewing the use of the herbicide alachlor, which is used to control weeds in corn, soybean, and other crops. The review is being conducted because of concerns about the potential for alachlor to cause cancer and other health problems. The EPA is currently conducting a series of studies to determine the risks of alachlor to humans and the environment. The results of these studies will be used to decide whether or not alachlor should continue to be used in the United States.
